- South Korea is the World leader in commercial air purification and sterilization installations
- The INBair technology is the most trusted and widely installed commercially in South Korea (over 300,000 units installed)
- Can you see an opportunity to distribute this World leading technology in your region?

VIRUS KILLER VK-001

DISPLAY AND MONITORING

- Display and Monitoring
- 4 Way Wind Direction
- 16ea LED Display

SILENCER

- Noise Cancelling Silencer For Whisper Quiet Operation

REACTOR CELL

- 16 Super UVC Lamps
- Mirrored Coating For Ultimate Reflection
- 72 TiO₂ nano Tube Filters For Generating OH Radical (world's strongest oxidant)
- Loose Activated Carbon Inside Tube Filters Absorbs Odours And Pollutants Allowing PCO to Decompose

VENTILATION

- Double Inlet Sirocco Fan
- S Pressure 42mmAq

COMPLEX FILTERS

- Pre Filter
- Carbon Filter
- HEPA Filter

Armed Forces Medical Center – South Korea
Infection Isolation Ward

Sihwa Hospital - ICU

Many air purifiers on the market make the general statement that they are effective against viruses and bacteria and will show inconclusive test results. In order to be effective against respiratory viruses – all of the four main groups (listed below) must be included and test results should be available and asked for. The Viruskiller range is unparalleled in its efficiency

Based on results obtained from test on inactivations of 3 selected viruses using the Viruskiller manufactured by INB Ltd, we can conclude as followings:

- 1) The Viruskiller could inactivate polioviruses 99.99%. Considering all the picornaviruses have the same property as poliovirus in structure and composition except antigenicity, we conclude that the Viruskiller can inactivate major common cold viruses in addition to poliovirus in air environment.
- 2) The Viruskiller could inactivate influenza virus 99.99% when it is used properly. Considering major respiratory viruses including mumps, measles and paramyxoviruses belong to the same myxoviruses as influenza virus, we conclude that the Viruskiller can inactivate most myxoviruses including influenza virus in air environment.
- 3) The Viruskiller could inactivate adenovirus 99.9%. Considering adenoviruses are large double strand DNA virus, we conclude that the Viruskiller can inactivate major large double strand DNA viruses including adenovirus, varicella and smallpox.

In summary, based on our tests on inactivation of viruses using the Viruskiller, we conclude the Viruskiller can inactivate most respiratory viruses in air environment.

(Influenza virus)

(Corona virus)

(Adeno virus)

(Polio virus)

Copies of test results are available by request

Reference Sites Of Government Health Centers – South Korea

Many Reference Sites In Hotels

Many Reference Sites In Conference And Business Centers

The list of reference sites in South Korea goes on and is a good indicator of what is about to happen in the rest of the World as we are forced to take Indoor Air Pollution more seriously.

The global air purifiers market is projected to cross \$ 59 billion by 2021, on account of continuously rising level of pollution and growing health consciousness among consumers, globally.
